## VOL. IV.

	Page.		Page.
<b>A</b> cid, carbonic	29, 371	Air exposed to heat in metallic tubes	389
Acid, septic, different from the nitrous and nitric	185	Alkali, volatile, solution of copper in	120
Acid, septic, modified by connection with pot-ash	190	Alkali, volatile, or ammoniac, its antipestilential effects	263
Acid, septic, distilled from pot-ash, takes the form of the nitrous	262	Alkali, volatile, recommended to purify infected air	85
Acid, septic, mistakes in science by confounding it with the nitrous	185, 190, 262	Alkali, volatile, a corrector of putrefaction	263
Acid contained in the matter of black-vomit	165	Alkali, volatile, employed in syphilis	416
Acids, nitrous and nitric, in syphilis, not to be relied on for radical cures	86	Alkali, fixed vegetable caustic, destroys printers' ink	323
Acids, sulphuric and muriatic, recommended in fevers	315	Alkalies, fixed, very efficacious in diseases of the skin	150
Acids, transmission of through hot earthen tubes	385	Alkalies, fixed, recommended in goitrous cases	157, 162
Acid of lemons efficacious in scurvy	424	Alkalies, fixed, attempts to analyze them	300
Acid, nitric, an <i>auxiliary</i> only in syphilis	425	Alkalies, fixed, utility of in surgery	301
Acid, nitrous, combined with opium for dysentery	431	Alkalies, fixed, efficacy of in fevers	85, 241
Adler, Mr. C. F. on the noctiluca marina	375	Alkalies, fixed, good remedies for cancers	415
Air, atmospherical, analysis of	65	Alcohol administered successfully after opium	347
Air, atmospherical, on the calcination of a metal in	27	Almond-nut, hybrid variety of	197
Air, inflammable, revival of a metallic calx in	25	Alpinus's, Prosper, account of the plague in Egypt	195
Air, pure, calcination of a metal in	27	Antisogmatics (cant word), definition of	134
Air contained in the pores of heated charcoal	34	Apple-trees, decortication of	104
Air, generation of from water	67, 389	Astrology, judicial, relics of	286
Air, absorption of by water	387	Astronomy, new system of	275
Air penetrates interposing substances	387	Atlas, magnetic	73
Air, land and sea, experiments on	408	Atmosphere, discordant experiments concerning its constitution	83, 186
<i>Vol. IV.</i>		Ayres, Mr. Stephen, travels to the westward	303

	Page.		Page.
Azote apparently a compound of hydrogen and oxygen	192	Calces, metallic, and coal, in a red heat	115
Baltimore, Maryland, opinion of the physicians of	351	Caldwell's, Dr. C. address to the Philadelphia medical society	400
Barker, Dr. J. uses alkalies for cancers	415	Campeachy, healthfulness of its calcareous base	5
Barton's, professor, memoir on goitre,	47, 155	Camphor stimulates vegetables	408
Barton, professor, on the rattlesnake and dipus	180	Cantharides, tincture of, cures tetanus	337
Berthollet's, Mr. observations on the lakes of natron	82	Cathrall's, Dr. I. experiments on the acidity of the matter of black-vomit	75
Berthollet's, Mr. observations on eudiometry	83	Catlett, Dr. H. on the yellow fever which arose on board the United States ship Ganges	243
Bison, American, account of	421	Catlin, Mr. A. on the noxiousness of the salivary discharge	427
Blair, Mr. William, on the use of acids in syphilis	86	Cautery, actual, salutary effects of	364
Black-vomit and dysentery in Mifflin county, Pennsylvania	107	Chalk, antiseptic virtues of	97
Black-vomit on board United States ships	3, 244	Chatard, Dr. on the yellow fever at Baltimore	253
Black-vomit, analysis of the matter of	164	Chilton's, Mr. observations on the hair-worm	147
Black-vomit, description of	ibid	Churchman's, Mr. J. magnetic atlas	73, 267
Black-vomit, remarkable experiments on	166	Cinder, finery, or scales of iron	31, 374
Blanchet, Mr. F. medical researches of	172	Coal, fossil, on the river Lehigh	71
Blanchet, Mr. F. on the combination of azote and oxygen	309	Coal, fossil, on the Hudson	419
Blood, circulation of, seen by the naked eye in some of the medusas	379	Coal, fossil, affords volatile alkali, and thus overcomes pestilential acidity in the air of cities	258
Bone, remarks on the absorption of	140	College, Columbia, medical lectures in	78
Bones, animal, preserved by calcareous earth	190	Collin, Rev. Dr. on the locust or cicada	71
Bones, animal, enormous, dug up, in Orange and Ulster counties, New-York	211, 213	Council, common, of New-York, vote of thanks to Dr. Mitchill	94
Bones of extinct animals	419	Counterfeiters destroy printers' ink by salt of ley	323
Botanists, American, information for	77	Cox's, Mr. James, machine for tanning	305
Brown, Dr. S. of Kentucky, on a singular tumour	223	Currie, Dr. William, on marshy situations	181
Brown, Dr. S. of Kentucky, on abolition of feeling	225	Currie, Dr. James, on water as a remedy	191
Brown, Dr. S. of Kentucky, on curing tetanus by tincture of cantharides	337	Cuvier, citizen, on fossil zoology	420
Brown's, Dr. S. of Boston, dissertation on yellow fever	61	Davy's, Mr. H. chemical and philosophical researches	183
Browne, Dr. J. of New-York, bleaches myrtle-wax	70	Dead, cautions on the interment of	94
		Dew, noxiousness of, in 1797	344

# INDEX.

V

	Page.		Page.
De Witt's, Mr. Simeon, address to the New-York agricultural society	57	Fever, yellow, salivation in, condemned	122
Digitalis purpurea, or fox-glove, virtues of	80, 108, 312	Fever, yellow, on board the ship General Greene	1, 234
Digitalis purpurea in pulmonary consumption	81	Fever, yellow, in Charleston	217
Digitalis purpurea in cutaneous eruptions	312	Fever, yellow, in Wilmington	240
Digitalis purpurea in pneumonia	108	Fever, yellow, on board the ship Ganges	244
Digitalis purpurea in mania	313	Fever, yellow, in the city of New-York, 1800	248
Digitalis purpurea in phthisis pulmonalis	ibid	Fever, yellow, in the city of Baltimore	253
Diseases, pestilential, in the cities of North-America during the summer and autumn of 1800	204	Fever, yellow, summary account of, in the United States	318
Diseases, epidemic, connection of, with earthquakes	340	Fever, yellow, raging violently in Spain	319
Drennan, Dr. W. on arresting contagion	83	Fever, yellow, in Norfolk	329
Drosera, or sun-dew, description of	196	Fever, yellow, cases of, locally produced in Baltimore	352
Dysentery caused by nitrous antiphlogistics	88	Fever, yellow, and true plague, analogy between	400
Eagle, Bald, valley, breeds yellow fever	75	Fever, yellow, takes the form of acute scurvy	425
Earle's, Mr. treatment of burns by cold	80	Fistula lachrymalis removed by alkaline lotion	153
Earthquake and meteor in Pennsylvania and Virginia	324	Foderè, on goitre and cretinage	155
Earthquakes, connection of with epidemic distempers	340	Fœtus, whether affected by maternal emotion?	305
Ebeling's, D. C. professor, 5th vol. of American geography	72	Foot, Dr. on the noxiousness of water and dew	344
Embalming done by means of soda among the ancient Egyptians	96	Fothergill on the distemper caused by the bite of rabid dogs	89
Etmuller traced fevers to an acid exciting cause	261	Freezing converts water into phlogisticated air	19
Evaporation, experiments on	179, 310, 311	Fumigation with nitrous vapour followed by yellow fever	235
Faure, Mr. on a pestilence at Narbonne, in France	245	Gallipolis breeds the yellow fever	73
Fever, yellow, in Philadelphia	8, 121	Gas, ammoniacal, an antidote to pestilential air	260
Fever, yellow, S. Brown's essay on	61	Gas, septic acid, evolved during putrefaction	ibid
Fever, yellow, in Delaware county, State of New-York	73	Gas, septic acid, the exciting cause of fever	261, 297
Fever, yellow, at Gallipolis, on the Ohio	ibid	Gas, septic acid, and ammoniac sometimes produced together	260
Fever, yellow, at New-Design, Mississippi	74	Gates, General Horatio, medal struck in honour of	306
Fever, yellow, in Nittany & Bald Eagle Valley, Pennsylvania	75	Gebhard, Mr. J. G. makes good castor oil	201
		Geography, American, in German	72
		Gibraltar and Iceland, specimens from	202

	Page.		Page.
Girtanner, professor, on the composition of azotic air	192	Insalubrity of marshy situations	181
Goitre of America, memoir on	47	Institute, French, at Cairo, memoirs of	82
Gold, native Mexican, superb specimen of	201	Jacob and Joseph, the patriarchs, embalmed in soda	96
Goose, wild, domestication of	198	Jefferson, Thomas, president of the United States, on the mould-board of the plough	201
Gordius aquaticus, multiplication of	148	Jena, mineralogical society of	78
Graham, Dr. J. G. on the fossil bones of the interior part of the State of New-York	213	Jerboa, or dipus, found on Long-Island	199
Green, General, ship, breeds yellow fever	I, 234	Johnson's, Mr. Seth, register of the weather	326
Guinot, Mr. finds alkalies good in puerperal fever	85	Johnson's, Mr. William, communication on the submerision of swallows	215
Guyton, Mr. attempts the analysis of alkalies	300	Kelp, the soda it contains formed during incineration	203
Harris, Dr. William, on cold bath in tetanus	76	Kennicott's, B. letter to president Cooper on the New-York Hebrew manuscript of the Bible	22
Harris, Dr. William, on black-vomit and dysentery	105	Kentish, Mr. treats burns and scalds with ol. tereb.	80
Head and face, diseases of relieved by actual cautery	365	Kollock, Dr. L. on the yellow fever	I
Hearing, observations on the sense of	247	Kunze, Rev. J. C. on chronology	200
Hedysarum gyrans, or moving plant	196	Kunze's, H. C. experiments on the acid humours of venereal ulcers	297
Herschel, Dr. experiments on light and heat	326	Lactuca fativa, opium from	409
Hillier, Mr. R. on saving skin in chirurgical operations	220	Lee's, Mr. G. dissection	138
History, medical, of America	392	Lee's, Mr. G. experiments on mercury	356
Hospital, New-York, experiments in	297	Lettson, Dr. J. C. on the tea-tree	72
Houses ought to be built of calcareous materials	91	Lewis, Rev. Mr. on the subterranean wall in N. Carolina	227
Hudson's river, waters of luminous with the nereis noctiluca to Pollepell's island, 1796	383	L'Hommedieu's, Mr. Ezra, communications to the agricultural society	59
Hudson's river, swallows plunge into it opposite the city of New-York, 1798	216	Light and heat, curious experiments on	327
Hudson's river, exhalation of in extreme cold (1801) explained	309	Lime, said to consist of carbone, azote and hydrogen	300
Hutchinsonian philosophy	81	Lime, interpretation of facts concerning	ibid
Importation of contagion of yellow fever a delusion	330, 352	Lime-stone conduces to healthiness	108
Indians (aborigines), their arrows and axes	309	Lime-stone and marble, antipestilential qualities of	92, 93
Ink-fish, or sepia	199	Liver, chief function of it to form soda	302
Insects in abundance not necessarily attendant on sickly seasons	304	Locked-jaw cured by electricity	77
		Locusts, or cicadæ, described by the Rev. Dr. Sandel	71

# INDEX.

vii

	Page.		Page.
London Medical Review and Magazine	209	Mitchill, Dr. on the <i>animalcular</i> phosphorescence of ocean water	303, 375
London, and other great cities where pit-coal is burned, are incessantly fumigated with ammoniacal gas	259	Mitchill, Dr. investigates the principle on which depends the production of watery vapour during extreme cold	309
Lyceum, republican, at Paris	430	Mitchill, Dr. ascertains the destructibility of printed characters by caustic alkali	323
Madness, efficacy of cold in	209	Mitchill's, Dr. observations on the canker worm made to the agricultural society	59
Madness cured by foxglove	313	Mitchill's, Dr. description of one of the forms of yellow fever in 1798	425
Magnesia said to consist of lime and azote	300	Molybdæna found in American granite	419
Mammoth, ivory tusk of, found in New-York	308	Moon, influence of on climate	285
Manganese, experiments on	135, 373	Moon, light of, possesses singular properties	290
Marle-shell preserves bones from putrefaction	190	Moores' Dr. D. concerning the local causes of diseases in Baltimore	351
Marthes, experiments on their atmosphere	410	Muriate of soda, ways of decomposing	422
Medusa simplex, or sea jelly, contributes to illuminate the ocean	376	Murray's, Mr. L. English grammar and exercises	307
Mercury, experiments on	356	Narbonne, a septic acid vapour, which produced a plague there	245
Miller, Dr. E. on the phenomena of sea-sickness	34	Negro, Maurice, turning white	199
Miller, Dr. E. on the cause of do.	36	Negroes suffer the yellow fever	334
Miller, Dr. E. on the treatment of the same	42	Negroes, their blackness ascribed to leprosy	409
Miller, Dr. E. receives vaccine pus and intelligence from Dr. Pearson	79	Nereis noctiluca assists in making the ocean luminous	377
Miller's, Dr. E. account of the sickness in the city of New-York during the hot season of 1800	207	Nereis, another species of, has a similar quality	ibid
Miller's, Dr. E. practice with digitalis purpurea	313	Newtonian philosophy treated as unscriptural and impious	280
Miller, Sylvanus, on the bones of the mammoth	211	New-York, transactions of its agricultural society, vol. iv.	57
Mississippi, travels in its vicinity	304	New-York, water-works in the city of	69
Mitchill, Dr. on building houses and paving streets of cities with marble and lime-stone	91	New-York, curious Hebrew manuscript in	21
Mitchill, Dr. on the employment of soda and chalk in the interment of the dead	94	New-York, improvements in	93
Mitchill, Dr. receives a vote of thanks	ibid	New-York, yellow fever in 207,	248
Mitchill, Dr. on the use of alkalies in surgery	149	Nitre of the ancients, or soda, neglected, and the nitre of moderns, or salt-petre, <i>mischievously</i> employed instead of it	262
Mitchill's, Dr. observations in natural history	196		
Mitchill, Dr. on burning coal, and on the antipestilential quality of volatile alkali	257		

	Page.		Page.
Norfolk, yellow fever bred there in 1800	330	Phthisis pulmonalis cured by foxglove	313
North-Carolina, medical society of	202	Physicians exhorted to assist in public bodies	399
Ocean owes the luminous quality of its water to living animals	303, 382	Plague and yellow fever, on	54
Opium, dangerous effects of relieved by alcohol	349	Plague in Egypt, apparently neither a specific nor contagious distemper	194
Ophthalmia cured by spirits of turpentine	89	Plague, like other fevers in America and Europe, assumes many forms	ibid
Origin, local, of yellow fever	3, 73, 74, 75, 107, 205, 206, 208, 234, 242, 244, 245, 252, 260, 331, 352	Plague or <i>koubek</i> means every sort of fatal or malignant disease	ibid
Oxyd, nitrous, experiments on	187	Plague seems not to be contagious in Asia	426
Oxyd, nitrous, seems to contain hydrogen	191	Pliny commends alkalies	150
Oxyd, nitrous, animals killed by it greatly resemble, on dissection, those destroyed by pestilential air	188	Pollock, Mr. H. sees swallows submerge	216
Oxyd, nitrous, coercible by alkalies	189	Potatoe, remarkable increase of	308
Oxygen, a remedy in fevers	318	Pot-ash, carbonate of, in puerperal fever	85
Oxygen said to cure syphilis	328	Pot-ash, carbonate of, in fistula lachrymalis	ibid
Oxygen attracted from the atmosphere to acidify pus	298	Pot-ash formed from its elements by incineration	189
Oxygen not necessary to make mercury salivate	361	Pot-ash, its endless modifications very perplexing in trade and manufactures	190
Oxygen a remedy for scurvy	423	Pot-ash said to consist of lime and hydrogen	300
Parturition, remarks on	427	Precipitation of one metal by another	32
Pascalis's, Dr. F. observations on yellow fever	8, 121	Priestley, Rev. Dr. on air from freezing water	17
Patterson, Dr. W. on stopping contagion	83	Priestley, Rev. Dr. on heating manganese in inflammable air	135
Pearl-ash, American, adulterations of	417	Priestley's, Rev. Dr. experiments on the composition of azote	193
Pearson, Dr. G. intelligence, &c. from	79	Priestley, Rev. Dr. on the sense of hearing	247
Perry, Dr. S. on electricity in locked-jaw	77	Priestley's, Rev. Dr. letter to the Reviewers	103
Philadelphia philosophical society, transactions of	65, 179, 408	Priestley's, Rev. Dr. six chemical essays	385
Philadelphia philosophical society, officers of	308	Queries concerning rain-water and dew	347
Philadelphia, commencement, medical, in	78	Questions, prize, of the Connecticut medical society	325
Philadelphia, chemical society in	303	Quicksilver not oxydated by trituration	362
Philadelphia medical society and officers	325	Quinquina or Peruvian bark	367
Philadelphia medical society, address to	400	Rain-water, vitiated quality of	345
Phlogiston, experiments relating to	388	Ramsay's, Dr. D. address to the medical society of S. Carolina	98

# INDEX.

ix

	Page.		Page.
Ramfay, Dr. D. on the yellow fever in Charleston	217	Soda formed from its elements during the incineration of the fuci, and other marine plants	203
Ramfay's, Dr. D. review of medicine in the 18th century	390	Spectrum, calorific, what	328
Rays, <i>invisible</i> , of the sun more numerous than the visible	328	Strata, calcareous, conducive to health	6, 108
Reich's, Dr. doctrine of fevers	314	Stratum of coarse marble in Westchester county	69
Retaliation on the importers of yellow fever	320	Streets should be paved and flagged with lime-stone	93
Reviewers, correspondence with them	103	Stringham, Dr. J. S. on foxglove	108
Rodgers, professor, finds nitric acid not a <i>radical</i> remedy in lues	425	Swallows seen to plunge in the Hudson, in August, 1798	216
Salivary discharge, noxious quality of	426	Sylvius, of Leyden, believed the exciting cause of fever was an acid	261
Saratoga medal, description of	306	Syphilis said to be cured by oxygen	328
Scurvy cured by the concrete acid of lemons	423	Tanning, machine for expediting	305
Seaman, Dr. V. on the endemic of New-York during the hot weather of 1800	248	Tea-tree, natural history of	72
Sea-sickness, causes of	36	Tetanus cured by cold bath	76
Sea-sickness, treatment of	42	Tetanus cured by tincture of cantharides	337
Selden and Whitehead, their account of the yellow fever at Norfolk, 1800	329	Thorne, Mr. R. V. W. on the calcareous base of Campeachy	5
Shephard, Mr. on alkohol	347	Tobacco-pipes, clay for manufacturing	200
Ships, Dutch, their cleanliness destroys infection	81	Torbert's, Dr. S. experiments on the acid ichor of cancers	298
Similarity of phenomena after death by nitrous oxyd and pestilential air	188	Tractors, metallic, probable mode of their operation	292
Simfon, Mr. S. on a Hebrew manuscript Bible	21	Transactions of New-York agricultural society	57
Skin, saving of, in surgery recommended	220	Transactions of the Philadelphia philosophical society	65
Small-pox, mortality of, in Halifax, Nova-Scotia	320	Tytler's, Mr. J. treatise on plague and yellow fever	54
Small-pox, conjectures concerning its virus	264	Vaccine pox, progress of inoculation in Europe	321
Soda, carbonate of, antiseptic qualities of	96	Vaccine-pox milder and safer than inoculated small-pox	322
Soda, sulphate of, manufactured	70	Vaccine-pox supercedes the small-pox	ibid
Soda said to consist of magnesia and hydrogen	300	Vaccine-pox, virus of received by Dr. Miller	79
Soda formed by synthesis in the liver	302	Valentin, Dr. L. on bronchocele	162
Soda, muriate of, decomposed by carbonate of lime	82	Valentin, Dr. L. on the actual cautery	364
Soda, employed by the ancient Egyptians in embalming	96	Vapour, watery, visible in America during certain states of extreme cold weather	310
Soda ought to be given where modern practitioners prescribe nitre or salt-petre	261	Vapour, nitrous, fever rages after fumigating a ship with it and other acid fumes	235

	Page.		Page.
Vaughan, Dr. J. on the diseases of Delaware	130, 238	Water, <i>sea</i> , when 25 degrees, or more, warmer than the atmosphere, seen to smoke	311
Vaughan's, Dr. J. valedictory lecture	291	Wax, myrtle, bleaching of	70
Vaughan, Dr. J. on parturition	427	Weather, notes on, for 1800	326
Volta's, Signor, galvanic pile	79	Webster, Mr. N. on earthquakes and epidemics	340
Vomit, black, contains an acid	75	Wildenow, professor, proposes botanical exchanges	77
Ulcers healed by alkaline dressings	152	Wistar's, professor C. experiments on evaporation	179
Ulcers, venereal, foul, contain an acid	297	Wood, rotten, contains not an alkali but an acid	190
Ulcers, cancerous, abound with acidity	ibid	Woodhouse's, Professor J. vindication of the new chemistry	25
Ulcers, phagedenic, caused by dew and rain-water	346	Woodhouse's, professor J. vindication, No. II.	112
Waring, Dr. E. T. on the yellow fever	234	Woodhouse's, professor J. vindication, No. III.	371
Water, by freezing, converted into phlogisticated air	20	Young's, Dr. Joseph, system of astronomy	275
Waterhouse, professor B. on the kine-pox	176	Young's, Dr. Joseph, physiological treatise	412
Water, <i>rain</i> , when 19 degrees or more warmer than the atmosphere, emits visible vapour	310	Zeolites discovered in N. Jersey	419
